

Beekmans Retractable Awning Side-arm

Beekmans Side-arm Retractable Awning

Our seaworthy side-arm retractable awning uses gas spring-loaded arms that pull the awning fabric tight as it rolls from a central drive tube. Beekmans-rvs.com can supply a standard or custom system to fit any structure on the vessel and provide up to 18 m² of shade. The custom system will be executed with a standard closing part upon which a custom bulwark part can be mounted. The system can be supplied as a ready made box containing the side arms, roll with fabric, motor and controls. The combination of high quality stainless steel combined with various styles of fabric and integrated lighting makes the awning a genuine eye-catcher.
